- Wiley Winters
- MSDS 670 — Data Visualization
- 18-FEB-2024

0.0.2 Dataset Information

Dataset: Jobs and Salaries in Data Science Metadata: - `work_year`: Year in which data was recorded. - `job_title`: Specific title of the job role. - `job_category`: Classification of the job role into broader categories for easier analysis - `salary_currency`: Currency in which the salary is paid - `salary`: Annual gross salary of the role in the local currency - `salary_in_usd`: Annual gross salary in USD - `employee_residence`: Country of residence - `experience_level`: Classifies the professional experience level of the employee - `employment_type`: Specifies the type of employment such as *full-time*, *part-time*, *contract*, *etc* - `work_setting`: Work setting or environment such as *remote*, *in-person*, or *hybrid* - `company_location`: Country where the company is located - `company_size`: Size of the employer company categorized as *small (S)*, *medium (M)*, and *large (L)*

Formal Reference to Dataset

Qaasim, H. (2023, December). Jobs and Salaries in Data Science. Version 6. Retrieved December 25, 2023 from https://www.kaggle.com/datasets/hummaamqaasim/jobs-in-data/data

---

Import required packages and libraries. Set global configuration items.

[1]:
```
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
import matplotlib.ticker as mtick
from matplotlib import rcParams
import numpy as np

# Suppress Warnings
import warnings
warnings.filterwarnings('ignore')

# Set seaborn style and autoconfig
```

```
sns.set_style('whitegrid')
rcParams.update({'figure.autolayout': True})
```

Read dataset into a Pandas DataFrame

[2]:
```
jobs_df = pd.read_csv('data/jobs_in_data.csv')
jobs_df.sample(5)
```

[2]:
```

```

The dataset covers years from 2020 to 2023. In order to not double count some values. I will only work with 2023 data

Check some basic items to see if the dataset requires cleaning or not

[4]:
```
print(jobs_df.info())
print('\nNaN Values:\n', jobs_df.isna().sum())
print('\nDuplicates: ', jobs_df.duplicated().sum())
print('\nSize: ', jobs_df.size)
print('\nDistribution:\n', jobs_df.describe().T)
```
